The open-source Google art project. Available as text, graphics, music, and video. Glogster is a Google-backed project launched on Open Source Day. The goal of the project is to enable people to create digital versions of their artistic collections. The project aims to work across all media by enabling the creation of visual content based on text-based collections. The website is still in beta and includes a free membership (although you can't add media at the moment). Click for the Glogster format of posters. Sites like Glogster aim to empower citizens to share their works of art through the arts, and do it in a way that is artistically pleasing to look at. The project allows you to upload text-based collections of art (created in the form of a pdf, a.txt, or a.odt, etc), and then use the text as the basis for a multimedia poster that can be printed out and bound. As it's all based on text, you can freely use any font, size, or even colors. The poster itself is actually an image, not a real pdf or png file - it's an image. So you can do things like have it scaled down to a phone size, use it in another design, etc. As of right now, the majority of Glogster works are text-based. There are some nice text-based designs and "Google Art Pro" collection. New projects are added on a weekly basis, so be sure to keep checking. It's a creative, free project for anyone who loves art and is willing to share their work. Google Art Project: Another project that works similar to Glogster is Google Art Project. It was launched on June 15th, 2010 with a lot of fanfare. Like Glogster, the project allows users to upload their art collection to be posted as a multimedia poster. Google Art Project is geared toward students and art lovers alike. The idea is that you're a student at a university and have access to Google's servers, and you download Google Art Project on your computer. This process makes your collection available on the site, and is currently limited to 2 collections. Using Google Art Project To use Google Art Project, just click on the image below: Once the image opens, click on the PDF Download link at the top. If you want to upload your work, just click 82157476af
